

BRITNEY MARTINEZ

San Antonio, TX | (915) 262-5659 | britneymartinez571@gmail.com

Portfolio: lucidsweettea.github.io

PROFESSIONAL SUMMARY

CompTIA Security+ certified and Cum Laude B.B.A. in Cybersecurity graduate with hands-on experience supporting access authorization, Microsoft 365 users, incident and issue triage, endpoint checks, technical documentation, and escalation coordination in a high-responsibility environment. Applied Windows hardening, network and web traffic analysis, PKI, virtualization, and vulnerability-assessment concepts in labs using Nmap, Burp Suite, Metasploit, Kali Linux, and Windows Server. Targeting entry-level SOC, cybersecurity analyst, GRC, or IT security support roles.

CERTIFICATIONS & SECURITY TRAINING

CompTIA Security+ (SY0-701) - CompTIA | Certified Jul 2026 | Valid through Jul 2029

Google / Coursera: Foundations of Cybersecurity | Completed Feb 2024

Google / Coursera: Play It Safe: Manage Security Risks | Completed Mar 2024

TECHNICAL SKILLS

Security Operations & Risk: Incident triage, access authorization review, credential processes, incident documentation, risk assessment concepts, data protection, DLP/IAM concepts

Systems & Networking: Microsoft 365, Windows, Windows Server, Kali Linux, Oracle VirtualBox, DNS, HTTP/HTTPS, SSL/TLS, OpenVPN, network analysis

Tools & Scripting: Nmap, Burp Suite, Metasploit, Hydra, Python fundamentals, Excel

Security Knowledge: Host hardening, access controls, vulnerability management concepts, PKI, encryption, incident response lifecycle, security monitoring fundamentals

Professional: Technical documentation, reporting and analysis, troubleshooting support, vendor/client coordination, team leadership, conversational Spanish

EDUCATION

The University of Texas at San Antonio - Bachelor of Business Administration in Cybersecurity

Graduated Dec 2025 | GPA: 3.7 | Cum Laude | Dean's List | President's List

RELEVANT EXPERIENCE

Assistant Director, Professional Security Consultants –

Oct 2021-Present

San Antonio, TX

- Conduct access authorization reviews and support credential-related processes, reinforcing secure access practices, least-privilege principles, and policy compliance.
- Provide initial Microsoft 365 user support and perform equipment and endpoint checks to identify common account, access, connectivity, and device issues.
- Triage operational and technology-related issues, document troubleshooting actions, and coordinate timely escalation and resolution with internal teams, contractors, and vendors.
- Document incidents and recurring issues, organize reporting data, analyze trends, and communicate findings to management to support risk-aware decisions and process improvement.
- Maintain secure communications and accurate records while handling sensitive information with discretion in a high-responsibility environment.
- Train employees on secure access procedures, documentation expectations, and escalation workflows to improve consistency, accountability, and policy compliance.
- Lead daily operations for a multi-million-dollar facility and supervise 20+ employees, balancing technical support, training, urgent priorities, and consistent follow-through.

CYBERSECURITY PROJECTS

- **Windows Host Hardening:** Applied 10+ techniques including firewall tuning, privilege restrictions, auditing controls, and secure configuration in Windows-based lab environments.
- **Network Breach Analysis:** Reviewed network traffic and security indicators to identify suspicious activity, connect technical evidence, and document findings and recommended remediation.
- **Web Traffic Analysis:** Used Burp Suite in controlled lab environments to review HTTP/HTTPS requests, authentication behavior, and application responses while documenting potential weaknesses and attack paths.
- **Hack The Box - Vaccine & Unified:** Completed hands-on labs involving service enumeration, web and database analysis, credential discovery, privilege escalation concepts, and structured technical notes.
- **PKI & Security Documentation:** Completed certificate workflow exercises, practiced access-control and encryption concepts, and produced technical write-ups documenting methods, findings, and remediation steps.
